Originalgröße

**Technik**

Mini-Industriekupplung aus den Kunststoffen POM und PVDF. Überdurchschnittliche Durchflussleistungen für flüssige und gasförmige Medien. Große Bandbreite an Materialien und Ventilvarianten. Ein neuartiges Verriegelungssystem aus Kunststoff mit einer griffigen Entriegelungshülse erweitert die Einsatzmöglichkeiten dieser kleinen Schnellverschluss-Kupplung erheblich.

**Durchfluss-Diagramme**

Folgende andere Ausführungen finden Sie im aktuellen Gesamtkatalog auf Seite:

- ▶ Edelstahl einseitig S. 173
- ▶ Edelstahl beidseitig S. 193
- ▶ Messing/Stahl S. 34
- ▶ Sicherheit S. 256
- ▶ Kodierte Systeme S. 292

**Vorteile**

Einhandbedienung. Zwei verschiedene Hülsenformen. Die Kupplung ist mit einem beidseitig absperrenden Ventil ausgerüstet und kann deshalb sowohl einseitig absperrend (d.h. Stecker ohne Ventil) als auch beidseitig absperrend (d.h. Stecker mit Ventil) gekuppelt werden. Auch als Durchgangskupplung (d.h. ohne Ventil) ist die Kupplung lieferbar. Die farbige Kennzeichnung der Kupplung und des jeweiligen Steckers bietet die Gewähr, dass ein Verwechseln der Medien beim Kuppeln ausgeschlossen wird.

**Druckbereich**

PB = 10 bar (POM, bei 20°C)  
PB = 8 bar (PVDF, bei 20°C)  
maximaler statischer Betriebsdruck (ohne Pulsation) bei min. 4-facher statischer Sicherheit.

**Temperaturbereich**

-20°C bis +80°C (POM)  
-20°C bis +120 (PVDF)  
jeweils abhängig vom Durchflussmedium.
